

## Welcome:

Here is the 10th edition of TecNews, the newsletter from Verotec.

In this issue we are featuring our accessory product ranges. Useful accessories such as handles, feet and castors which enable customers to adapt Verotec's enclosures to their specific application. Verotec also recently completed an integration project utilising the 19inch rack case. This month we feature the details of this programme.

## Latest News:

The new financial year at Verotec got off to a flying start with the awarding of two of its largest orders. Over 500 x 19" Diplomat cases were ordered from a US-based Bio-Medical company whilst in the UK, Verotec were successful in winning a contract to supply over 100 integrated track-side cabinets, ultimately destined for Network Rail.

## Product Feature: Accessories

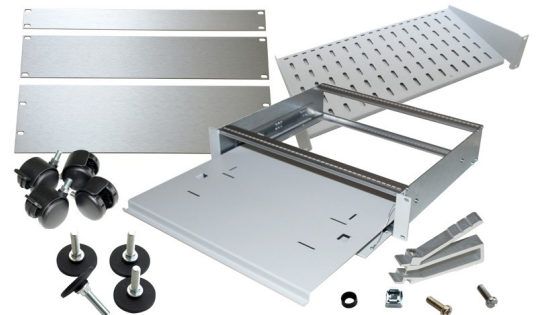

In order to make its product ranges more adaptable to customer applications Verotec has a range of accessory products which can be bought to "customise" the various product ranges supplied by the company.

Aluminium Front panels are one of the key accessory product ranges. Manufactured in 3mm aluminium or 2mm steel they are available in a range of heights from 1U to 12U and in both 10.5 inch and 19inch widths. Finishes are clear aluminium, anodised and black smooth painted steel. Optionally the aluminium panels are available up to 3U with a vent pattern to allow the panels to be fitted to a cabinet which requires cooling.

Importantly Verotec also supplies fixings for mounting 19inch panels and equipment. Caged nuts, which are suitable for differing gauges of panel, can be fitted to panel mounting angles to accept M6 fixing screws for fixing the panels and equipment. Verotec also supplies a "caged Nut Insertion tool". This is especially useful if undertaking a large installation where possibly hundreds of caged nuts need to be fitted. The tool compresses the caged nut frame for insertion and means that tools, that can cause damage do not have to be used, saving damage to the enclosure and fingers.

Verotec also supplies other useful accessories such as cabinet castors and shelves. The castors are available in both medium and heavy duty sets and the shelves which mount from 19inch mounting angles are available in 250mm and 400mm depths.

Finally there are keyboard drawers, which are also 19 inch mounting and use 2u of vertical height in a cabinet. The keyboard drawer has a hinged, lockable front plate and a slide mounted keyboard shelf. The shelf has a "positive stop" both in and out. This product is especially useful for service engineers that have to move from rack to rack who can not only use the keyboard shelf for using a keyboard but can also use the sliding shelf as a temporary work top.

## Recent Projects: 19inch Rack Case Integration

Most of the standard catalogue products that Verotec sell will, at some point, be modified or integrated to a higher level. For example; a front panel might be specially machined or additional electro-mechanical components added to suit a certain application. Verotec can assist its customers by offering such value added services. We've recently completed the design, manufacture and integration of a number of 19" cases to a leading scientific research establishment. The project involved modelling a number of bespoke circuit boards, power supplies and I/O interconnects into one of our standard Rack-case products before manufacturing, integrating and testing the units. Constant input from the customer during the design cycle ensured the end product was supplied to specification.
