Welcome:

This is the 16th edition of TecNews, the newsletter from Verotec.

In this issue we are featuring the Imrak 1400 cabinet range and discuss a special Veroshield case for the French market.

Latest News:

Verotec is currently undertaking a programme of upgrades to the design of its Verotec instrument case range. The new design will include 19inch mounting as standard, revised configuration, front handles and a new, two tone colour scheme.

As the product which bears the company name it is important that the Verotec case is "in line" with the latest market requirements and remains one of the company's key enclosure ranges. Look out for further launch information and updated catalogues in the next couple of months.

If you would like to know more then please contact Verotec's sales team on 02380 246900 or e-mail: sales@verotec.co.uk

Product Feature: Imrak 1400 Cabinets

The Imrak 1400 range of cabinets has become the standard by which other cabinet designs are measured. Available in a range of heights from 12 to 47U, widths of 600 & 800mm and depths of 600, 800 and 1000mm the Imrak 1400 is widely used in the electronics and communications industries.

Imrak 1400 construction is based upon a framework with 4 corner pillars, which determine its height and two end frames which set its width and depth. The construction provides an extremely accurate and robust frame, which has a static load capacity of up to 1000kg.

Options for the cabinet include:

- 19inch Panel Mounts
- Top Vented or Side vented roof
- Side Panels with optional locks
- Glazed, Vented or Solid Doors
- Short Doors with infill panels
- Castors and Jacking feet
- Baying / Joining Kits
- Plinths
- Roof mounted fans
- Chassis Supports & Shelves
- Cable Management

Imrak 1400 provides one of the most stylish, robust and flexible cabinet ranges in the market today. Verotec also provide an assembly service which means that customers can have a cabinet to a specific configuration, usually within a few days of placing an order.

Recent Projects: Eurocard Veroshield Rackcase

Our standard **Veroshield** product is a 19" EMC screened Rackcase for applications where sensitive electronic equipment needs to be housed in a rack-mounting enclosure. In addition to our standard product offering, Verotec can provide design and engineering services to realize modified versions to suit customer-specific requirements. We've recently done just that for a customer that required a standard 1U / 19" housing but needed to house 3 x extended length Eurocard-style PCBs, that were accessible through the front panel. KM6-II tiebars were used to support our aluminium 3-part guides and create a card cage whilst BeCu gaskets were fitted to the front panel apertures to maintain EMC. Front and rear panels were machined to suit the customer's interconnect and the whole enclosure was electro-plated with a conductive finish. The on-going programme will be supported through our new French office.
