Latest News

April signifies the beginning of a new year for Verotec.

The last 12 months have seen us make some significant investments in our engineering capability that include the addition of a mechanical designer, the purchase of CAD software and enhancements to our manufacturing facilities.

These are all part of our ongoing strategy to develop our TecServ+ business; providing our customers with value added services in enclosure design & manufacture, which we plan to continue doing through 2014.

Our newly published 2014 Product Handbook is available now.

To order your free copy of the handbook, or for more information on any of our products, contact Verotec's sales team on 02380 246900 or e-mail: sales@verotec.co.uk

Welcome

This is the 28th edition of TecNews, the newsletter from Verotec. In this issue we feature our IMRAK1400 cabinet and discuss a customised application of Verotec's KM6-HD subrack.

Product Feature: IMRAK 1400

Since its introduction, the award-winning IMRAK 1400 cabinet range has enjoyed considerable success in the international networking, electronics & broadcasting markets.

The widespread acceptance of IMRAK among installers and end-users across the world lies in the inherent qualities of the enclosure platform; from its superior build quality to a vast array of accessories.

IMRAK is a particularly versatile 19" enclosure system, available in widths of 600 & 800mm, depths of 600, 800 & 1000mm, and heights of 12U-47U. It is exceptionally rugged and strong, allowing its users to ship fully equipped enclosures overseas, and being bolted together lends itself to being disassembled in situations where access is difficult.

IMRAK 1400 boasts attractive styling, finished in pale and dusty grey (RAL 7035/7037), making it equally suitable for office, equipment or communications rooms. It is complimented by an extensive range of accessories including baying kits & trims, thermal management, cable management, earth kits & power distribution, 19" panels & shelves and fixing hardware.

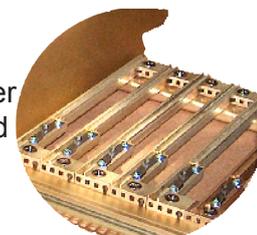

Recent Projects: Special KM6-HD Subracks

Verotec has recently completed the design and supply of a number of customised 6U/40HP heavy-duty KM6-HD subrack assemblies.

Destined for the US Navy, the MIL-STD-167 compliant subracks were specified by, and sold to, a leading US marine systems integrator to have VME64 Extensions backplanes and board sets installed.

Although standard front and rear tiebar extrusions were used, the customer opted to have metal card guides fitted (in place of plastic ones) for added strength and rigidity.

This is a qualified upgrade path available through our **TecServ+** service, thus reducing design & engineering costs and time to market. Also modified were the side plates and overall finish, where Gold Chem Film (Chromate Conversion) was used over the standard Iridite NCP.
