Latest News

Whilst Verotec has aligned its quality system to the requirements of ISO9001, we're always looking at areas for improvement. One such area is the identification and use prevention of counterfeit electronic parts, this being a growing issue for our customers.

Verotec are addressing industry concerns by looking at implementing a policy based on aerospace standards AS5553 & AS6081 – a full press release will follow.

To order your free copy of our handbook, or for more information on any of our products, contact Verotec's sales team on 02380 246900 or e-mail: sales@verotec.co.uk

Reg: FM 569208 ISO 9001

Welcome

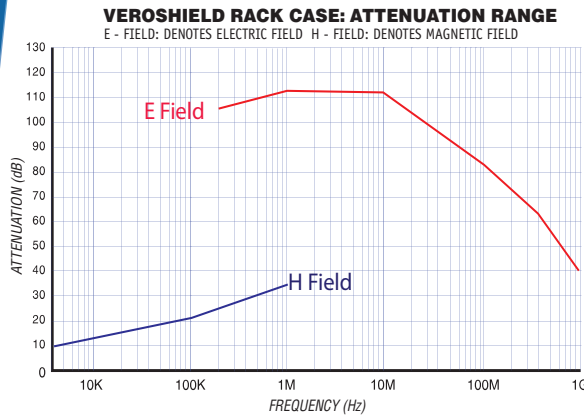

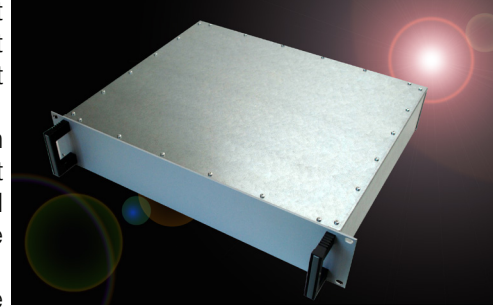

This is the 31st edition of TecNews, the newsletter from Verotec. In this issue we're concentrating on the Veroshield case; looking at the product specification and featuring some examples of custom designs.

Product Feature: Veroshield Case

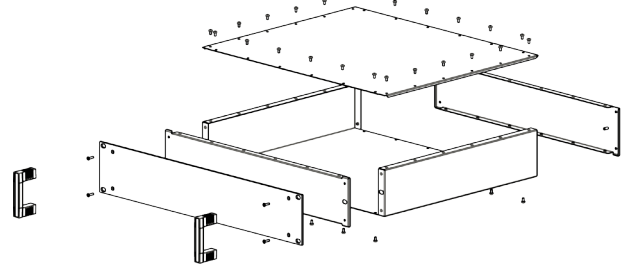

The Veroshield case is designed for applications that demand a high level of EMC screening, protection against ingress of dust / water and a cosmetic appeal without compromising on strength and usability.

The 19" rack mounting enclosure is constructed from 0.9 mm galvanised steel to maintain electrical conductivity throughout the unit; an additional front panel, external to the screened enclosure, is provided to improve the appearance when the unit is mounted.

Available in heights of 1U, 2U & 3U, the Veroshield case has been designed to meet the requirements of IP54, offering protection against dust and splashing water.

Removable top and bottom covers facilitate easy access to the internal components; they are secured with multiple fixings around their periphery to ensure that slot lengths are kept to a minimum to preserve the high levels of attenuation.

Recent Projects: Custom Veroshield Cases

TecServ+ is the vehicle by which Verotec delivers its value-add services, such as design & engineering, machining, silk screening, digital printing and integration. When it comes to Veroshield cases, we've worked with a number of customers across various industries to assist in bringing to market custom versions of the product.

Some examples are shown below, destined for broadcast, general electronics, instrumentation & control applications.
