Latest News

With the end of another financial year, we're pleased to report an increase in sales with the percentage of exports rising to 48% - mainly to the US and Canada.

This we put down to our continued focus on customer service and product quality. Our standard catalogued products were the backbone of our business and we'll be continuing our commitment to these with the introduction of a brand new 19" & desktop instrument case this summer.

This is the 33rd edition of TecNews, the newsletter from Verotec. In this issue we report on last years sales, feature our range of KM6 subracks and discuss custom stage enclosures for the entertainment industry.

Welcome

Product Feature: KM6 Subracks

In order to meet the diverse mechanical, electrical and environmental requirements that today's markets and applications demand, Verotec offer two comprehensive & market-leading subrack ranges; KM6-II and KM6-HD.

KM6-II subracks are fully compatible with DIN 41494 and IEC 60297, they are strong, versatile and easy to assemble with many accessories. All tiebars have two screw fixing positions making the construction robust yet accurate and well suited to light and medium duty applications such as infrastructure, simulation, general electronics and instrumentation.

KM6-HD subracks, although primarily designed for military use, would suit any rugged application where a resistance to shock and vibration is required, such as rail & marine. In addition to IEC 60297 and IEEE 1101.10/11, they also meet the requirements of MIL-STD-167 (for vibration) and a 25G shock rating. Features include positive guide retention, heavy duty two screw fixing tiebars and 3mm thick side plates and rack angles.

Both ranges include 3U-9U heights, 180mm-420mm depths & 24HP-84HP widths, backplane and DIN connector mountings, EMC options, various cover / closing options and an extensive range of accessories including divider kits, PCB guides, handles, front panels and modules

Recent Projects: Stage Boxes

Any live performance involving amplified music and lighting on stage requires large amounts of power and audio signal distribution.

Verotec was recently approached by a large PA company and asked to assist in developing a number of electrical enclosures that would greatly assist their roadies & engineers in providing such, for a variety of upcoming tours and festivals.

Being bespoke enclosures, design and development was very much in the form of computer models, with constant input from the customer in terms of electrical, mechanical and environmental specification.

Industry standards were adopted wherever possible and the final products were delivered, CE marked, on time and within their budget.

To order your free copy of our handbook, or for more information on any of our products, contact Verotec's sales team on 02380 246900 or e-mail: sales@verotec.co.uk
